El Camino Hospital's new Center for Advanced Radiotherapy and CyberKnife Radiosurgery - a Northern California hub for tumor treatment - offers more treatment options and expertise for treating tumors throughout the body, including prostate, brain, spine, lung and breast than any other facility in the area.

The hospital's new 7,000-square-foot single-story medical office building houses a new Varian Trilogy Tx Linear Accelerator, an Accuray cyberknife, and a CT scanner.

Thornton Tomasetti provided structural design of the building that includes both wood-frame construction and reinforced concrete vaults as well as medical equipment anchorage.
