

St. Philip's Academy

Newark, New Jersey

Client

Fireman's Fund

Architect

Gensler

Completion Date

2007

Total Area

13,000 sf

In an effort to determine the source of water intrusion and resultant damage that was adversely affecting a LEED Registered building envelope, Thornton Tomasetti evaluated a "green" roof at the St. Philips Academy in New Jersey on behalf of a major insurance carrier.

Our cause & origin investigation determined whether the roof had been properly installed. Based on our findings, we made recommendations which the architect then instituted.
